

Datasets in R

The dataset I am using is this one below. I chose this dataset because I plan on using it for my final project so I might as well get a head start on it!

<https://www.kaggle.com/datasets/abdullahashfaqvirk/student-mental-health-survey>

R code

Load Dataset

```
library(readr)
mental_health <- read_csv("data/MentalHealthSurvey.csv")
```

Rows: 87 Columns: 21

-- Column specification -----
Delimiter: ","

chr (11): gender, university, degree_level, degree_major, academic_year, cgp...

dbl (10): age, study_satisfaction, academic_workload, academic_pressure, fin...

i Use `spec()` to retrieve the full column specification for this data.

i Specify the column types or set `show\_col\_types = FALSE` to quiet this message.

```
print(mental_health)
```

A tibble: 87 x 21

	gender	age	university	degree_level	degree_major	academic_year	cgpa
	<chr>	<dbl>	<chr>	<chr>	<chr>	<chr>	<chr>
1	Male	20	PU	Undergraduate	Data Science	2nd year	3.0-3.5
2	Male	20	UET	Postgraduate	Computer Science	3rd year	3.0-3.5
3	Male	20	FAST	Undergraduate	Computer Science	3rd year	2.5-3.0
4	Male	20	UET	Undergraduate	Computer Science	3rd year	2.5-3.0
5	Female	20	UET	Undergraduate	Computer Science	3rd year	3.0-3.5
6	Female	20	UET	Undergraduate	Computer Science	3rd year	3.0-3.5
7	Male	26	PU	Postgraduate	Data Science	1st year	2.5-3.0
8	Male	22	PU	Undergraduate	Data Science	2nd year	3.0-3.5
9	Male	20	COMSATS	Undergraduate	Computer Science	3rd year	2.5-3.0
10	Male	23	COMSATS	Undergraduate	Computer Science	3rd year	2.5-3.0

i 77 more rows

i 14 more variables: residential_status <chr>, campus_discrimination <chr>,

```
# sports_engagement <chr>, average_sleep <chr>, study_satisfaction <dbl>,  
# academic_workload <dbl>, academic_pressure <dbl>, financial_concerns <dbl>,  
# social_relationships <dbl>, depression <dbl>, anxiety <dbl>,  
# isolation <dbl>, future_insecurity <dbl>, stress_relief_activities <chr>
```

Scatter Plot

```
plot(mental_health$academic_pressure, mental_health$anxiety, main = "Academic Pressure vs Anxiety")  
fit <- lm(mental_health$anxiety ~ mental_health$academic_pressure)  
abline(fit, col = "red")
```
